

Humidity (Dry) Info for Customers

Keep your instrument (acoustic or electric) around 45% relative humidity.

If you don't humidify your instrument after any repairs, all work is *not* warrantied. If you don't humidify, you pay again if it cracks again, which it will, often next to the previous repair glue line.

The cost of a sound hole/case humidifier (\$15) AND hygrometer (\$20) is far cheaper than the cost of repair caused by humidity: eg protruding fret ends, cracks, popped braces etc

If particularly dry, humidify the instrument in the case as the smaller environment of the case is easier to add humidity too than a room in the house.

Summer

- Air is hotter & can be very dry (Colorado).
- *Air conditioning further dries out the air.*

Winter

- Snow dries out the air.
- *Adding heat in the home, (central heating, log fire etc) further dries out the air very fast.*

For around \$35, you can be in control of dry humidity with these two excellent products I use:

Humidifier- Music Nomad MN300
(the sponge holds more water than others)
<https://amzn.to/3Uw3UDP>

Hygrometer- Acurite (01083M)
<https://amzn.to/48cT48I>
